IP500® Applications for Commercial Buildings & Industrial Facilities

Most robust & approved IoT wireless network

IP500® OEM Representatives

The global standard for wireless connectivity provides:

Highest Wireless Performance

Lowest Cost of Ownership

Interoperability

Safety & Security Regulations

IP500 Applications as ECO System

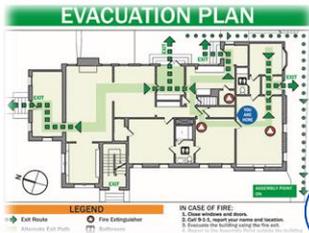

IP500 provide a wireless platform for a **full ECO system** for commercial & industrial applications

Direct connection to security services and mobile devices

Wireless sensors make the smart building safe and efficient

Dynamic & secure management of processes, assets and employees

Smart access control for indoor and outdoor

Smart management of energy consumption & light systems

IP500 Applications - Lighting

IP500 Lighting Application:

Target location in Smart Buildings: Assembly area, martial stock and office area

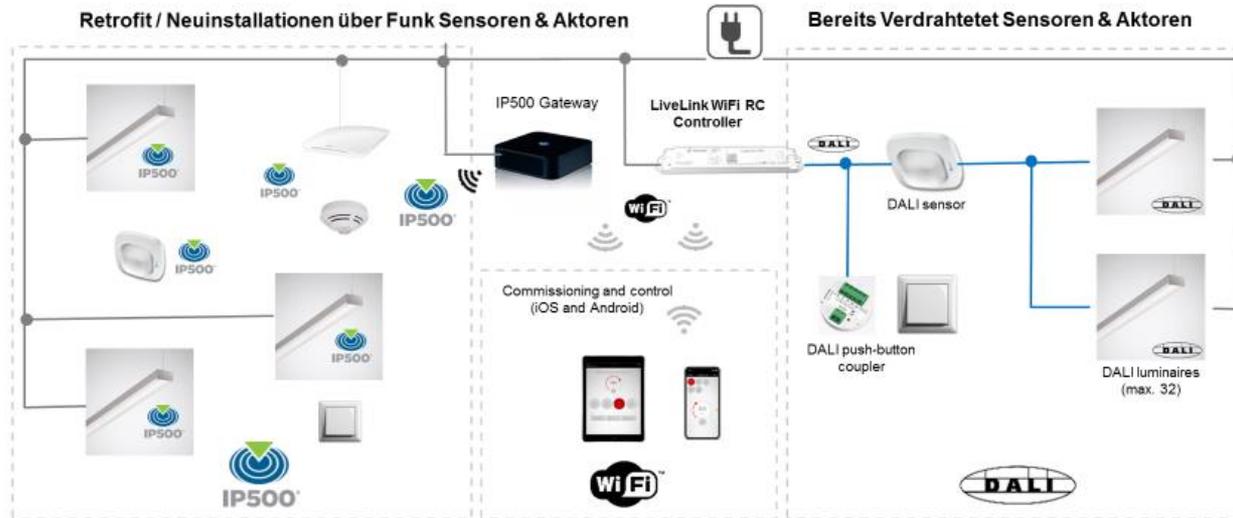

Goal: To increase quality of lighting at target areas; to safe energy consumption and to combine lighting with access control (i.e. for security people and robots)

IP500 OEM products: Light system, sensing devices, automated shutters

- LED lighting with IP500 sensing solutions provides smart lighting based on automated on demand and occupancy of people or robots
- Increases the security in working areas
- Reduces the energy consumption over the entire facility
- Smart Lighting during night shifts for people and robots

System diagram: see next slide

IP500 Applications – HVAC – Heating & Energy

IP500 HVAC & Climate Application:

Target location in Smart Buildings: Assembly area, martial stock and office area

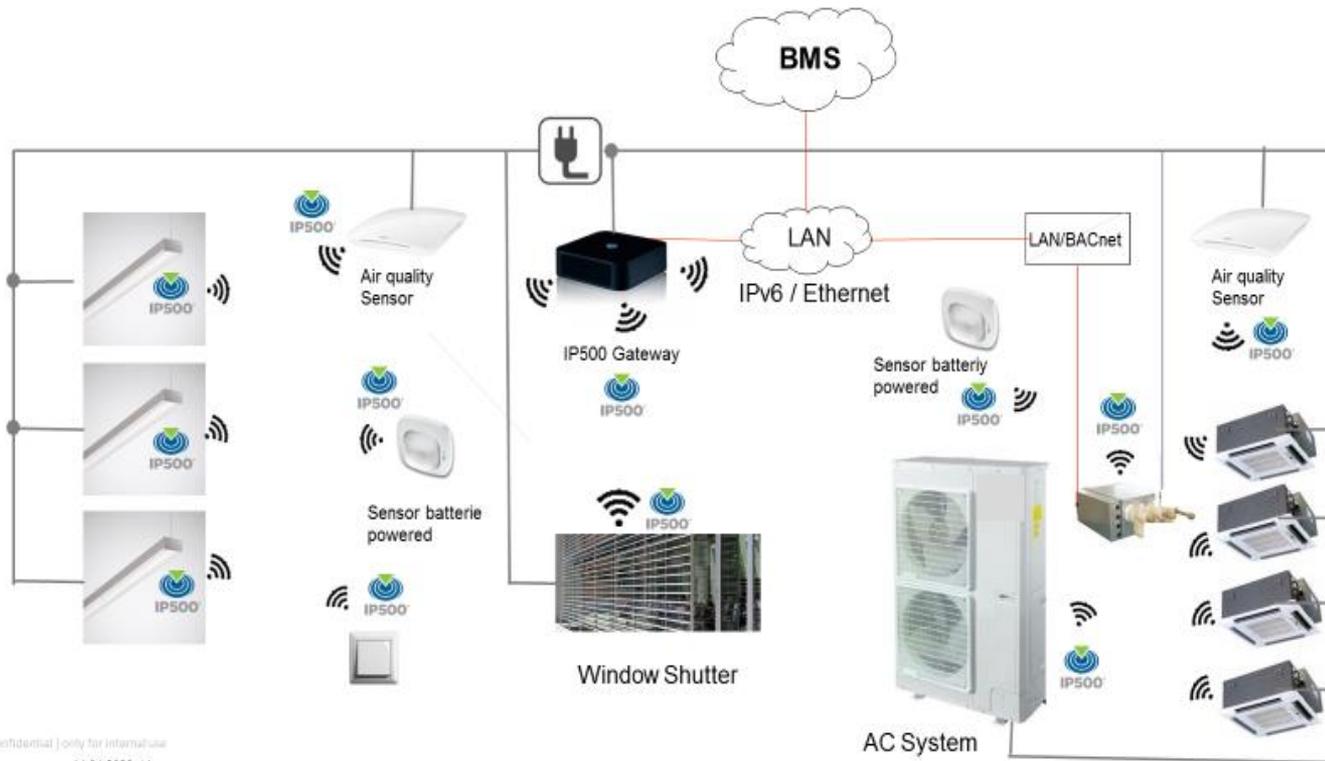

Goal: To increase quality of heating and cooling at target areas; to safe energy consumption and to combine the climate with the people occupancy situation.

IP500 OEM products: HVAC system, sensing devices, automated Windows and shutters

- HVAC with IP500 sensing solutions provides smart climate control based on automated on demand and occupancy of people or robots
- Measures and increases the comfort and air quality at working level
- Reduces the energy consumption over the entire facility
- Improves climate conditions for material quality (humidity, temperature etc.)
- Improves meeting room conditions in combination with gas sensing (i.e. CO2)

IP500 Applications - Security

IP500 Emergency & Security Applications

- Safety & Security
- Energy
- Comfort Service
- Mobility / Location
- Access Control
- Light Control

betreute Wohnanlage

FacilityControl Unit with Touch Display and access to cloude APP.

sensfix

IP500 Emergency Application:

Target location in Smart Buildings: Assembly area, martial stock, office area and outdoor area

Goal: To allow people calling for help, service or attention by using emergency bottom

IP500 OEM products: Emergency push bottoms, alarm server and message distribution SW

- Location of the emergency bottom is variable
- Increases the security at working level
- In combination with access control
- In combination with gas sensing (i.e. CO2)

IP500 Security Application:

Target location in Smart Buildings: Assembly area, martial stock, office area and outdoor area

Goal: To increase security and safety at target areas for people and the facility.

IP500 OEM products: Security system, sensing devices, automated doors & outdoor devices

- Sensing devices with IP500 provides higher and local security in defined areas
- Increases the security at working level and outdoor area
- In combination with access control and lighting to allow people and robots to move in an active security area
- Identify open doors and windows and inform / activate the facility or security people

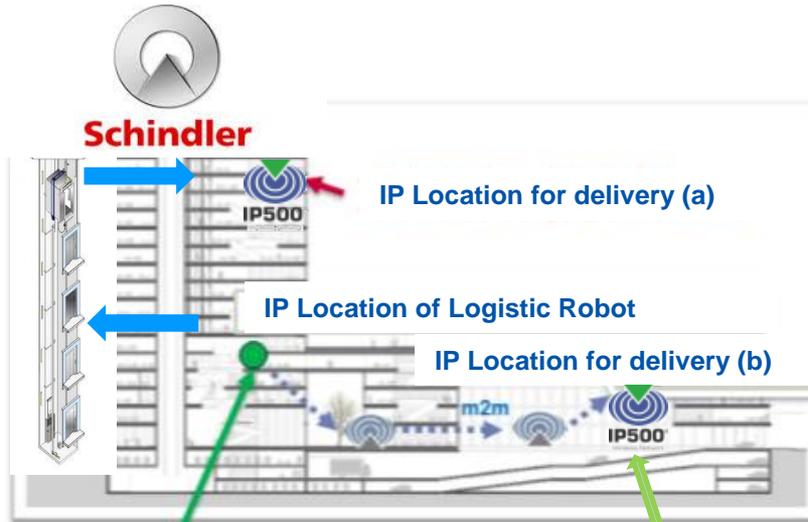

IP500 Applications – Access & Robotic

IP500 Applications for access and asset tracking

Industrial Applications

- Logistic delivery
- Security
- Asset Tracking
- Evacuation
- Maintenance

Goal: Secured Access:

Key Issues:

- Efficient guidance handicaps
- Access for people & robots
- Hands free asset access
- Secured access
- Inventory tracking
- Reaction time reduction
-

IP500 Solution:

- IP500 infrastructure
- IP500 security sensors
- IP500 access to elevators
- IP500 TAG (mobility)
 - * Active in-door localization
 - * Positioning
 - * x year battery life time

Schindler

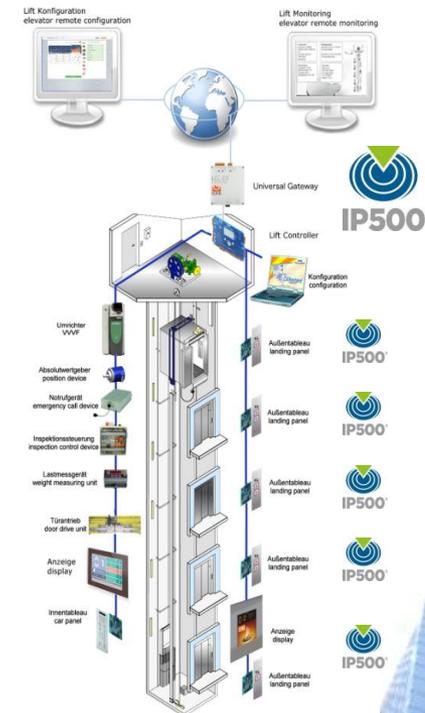

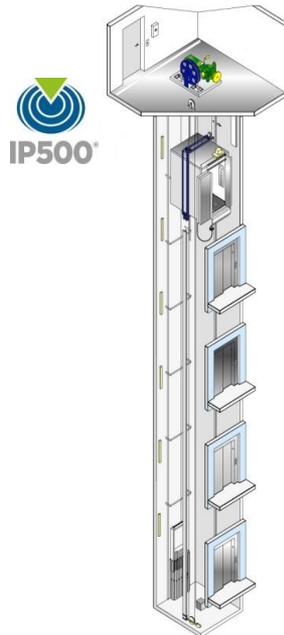

Hospitality and Hotels

IP500[®] - Project Opportunity in elevators

Communication in lifts based on IP500

IP500 Access Control Application:

Target location in Smart Buildings: Assembly area, martial stock, office area and outdoor area

Goal: To enable automated and secured access control at target areas for people and robots.

IP500 OEM products: Access system, sensing devices, automated doors & gates, robots

- Sensing devices with IP500 provides automated access of people or robots in defined areas in combination with the building situation, i.e. in fire or emergency situations
- Barrier free access for robots through doors, gates and elevators
- In combination with lighting
- In combination with the security system

IP500 Asset Tracking Application:

Target location in Smart Buildings: Assembly area, martial stock, office area and outdoor area

Goal: To track and control asset tracking of assets and people in target areas

IP500 OEM products: IP500 Infrastructure system, sensing devices, IP500 TAGs / company badge

- Can provide location and status of assets on the fly
- Provides location and status information of asset
- Improves logistical efficiency
- In combination with access control (access authorization)
- In combination with track loads and products tracking
- Provides status of the products during assembly

IP500 Alliance OEM Products for Interoperability Tests

IP500 Demo Room in Freiburg i.B., Germany

- IP500 performance with multiple OEM products
 - Shows the superior network performance
 - High density nodes in one building
 - Real time monitoring the results (status and performance per node over time)
- Installation with redundant gateways, repeaters
- Application combined as ECO system
- Results are shown at cloud level, as well locally at field test at the facility management
